Introduction.....	3
Parts of a Pedigree	4
Test Your Pedigree Knowledge	14
Practicing Pedigree Comparisons.....	16
“Rank These Heifers” Exercise.....	18

This workbook was developed to present a basic explanation of official Holstein pedigree formats and give readers basic skills in comparing and evaluating pedigrees. More comprehensive information on genetic evaluations and their calculations are available from each breed association. **Also, view the Holstein Foundation’s “Understanding Genetics and the Sire Summaries” workbook for a more detailed explanation.**

What is a Pedigree?

A pedigree is a record of an animal's ancestry, presented in a standard format. Information about the **sire**, the father of the animal, is listed on the top half of the pedigree, known as the "paternal side." Information about the **dam**, the mother of the animal, is printed on the bottom half of the pedigree, known as the "maternal side."

Three-Generation Pedigree Format

A three-generation pedigree includes the animal, sire and dam, and paternal and maternal grandparents. A four-generation pedigree would also include great-grandparents, and a five-generation pedigree would also include information about the great-great-grandparents.

Official Holstein pedigrees combine ancestry, performance and genetic information all into one easy-to-use document. Whether you're making mating decisions or trying to decide which sale animal might have a place on your farm, pedigrees give you the information and details you need to know. Official pedigrees also serve as a verified source of production and ancestry information, essential for the comfort of any potential buyer.

What are Pedigrees Used For?

Pedigrees provide detailed performance and genetic information about an animal and its ancestors, which has many uses. The pedigree values that measure the ability of the sire and dam to transmit their traits can help you predict the calf's future performance.

When selecting an animal to buy, different people will have different factors they look for on a pedigree, depending on what their goals are. Someone looking for a show calf will pay more attention to the calf's birthdate, the dam and sire's classification scores, any show winnings on the pedigree, along with Predicted Transmitting Abilities (PTAs) for Type, Udder and Feet and Leg composites. Someone looking for an exceptional milk cow will likely look at the TPI values on the pedigree, PTAs for Milk, Fat and Protein, as well as all production records on the pedigree. When investing a great deal of money in an animal, some might prefer the calf and her dam to be genomic tested so her PTAs have a higher reliability and are less likely to change with subsequent genetic evaluations. There are many examples, but all have one thing in common – analyzing a calf's pedigree will help provide insight into future performance. When beginning the search for your ideal project animal, first decide what information is most important to you.

Pedigrees also come in handy when making mating decisions on your animals. They allow you to review the animal's ancestry to avoid inbreeding, as well as get a total picture of the genetic strengths and weaknesses of the animal and her family. You can look for trends in milk production, classification score, TPI values, or other areas where you might want to improve the animal, then select a mate that will correct some of her weaknesses.

Parts of an Official U.S. Registered Holstein Pedigree

Pedigrees contain a wealth of important information on a single page. While each animal is different, their information is all presented in the same format, making it easy to evaluate and compare animals. Follow along with the pedigree below to learn about the information presented in each section of the pedigree. The following sections describe pedigrees issued by Holstein Association USA. For more specific information about other breeds, contact the breed association responsible for issuing the pedigree.

1. 100% Registered Holstein Ancestry (RHA-NA)

The first line, centered on a pedigree, shows the **percentage Registered Holstein ancestry (RHA)** and whether the animal is of a North American (RHA-NA) bloodline or International (RHA-I) bloodline. RHA percentages can range from 0 to 100% RHA, depending on the animal's lineage. Pride has 100% Registered Holstein Ancestry - North American, meaning that all of the animals in her pedigree are registered in North America; if any ancestor were registered in herds outside North America, the animal will have the "-I" suffix after their %RHA. Animals may have less than 100% RHA if they have unidentified ancestors in their pedigree. If an animal has unidentified ancestors, the highest %RHA they could ever attain would be 99% RHA.

2. 07/12/2012 18478
 FEMALE

Animal Barn Name: This can be an animal's short name or herd management number. Pride's herd management number is 18478.

Birthdate: Pride was born on July 12, 2012 (7/12/2012).

Animal Gender: Pride is a female.

3. **SIEMERS BRDNK AVAS-PRIDE-ET** P8 PTPI
USA 71360055 100%RHA-NA +1880

Line 1: Percentile Ranking (P-Level) and Total Performance Index (TPI) Type

P-Level: Indicates the percentile ranking of the animal based on their TPI. The percentile ranking compares registered animals of the same gender born in the same year. P-values are assigned for the top 50% of animals born within a given year, labeled P5 through P9. Pride's P8 level indicates she is in the 80th percentile, meaning her PTPI is among the top 20% of heifers born in 2012.

TPI Type: TPI may be described in a few different ways on a pedigree, depending on what type of information is included in the animal's genetic evaluation. The following abbreviations indicate the type of TPI listed for an animal:

- **PTPI (Pedigree Total Performance Index):** A heifer or cow that has not been genomic tested, and doesn't have a required classification score and/or is not enrolled in an official milk production records testing program; for bulls, they would not have any daughter information included in their genetic evaluations. It is the average of the sire and dam's TPI values.
- **CTPI (Cow Total Performance Index):** A cow that has not been genomic tested, but has a required classification score and a milk record completed under an official testing program.
- **GTPI (Genomic Total Performance Index):** A heifer, cow or bull that has been genomic tested; they may or may not have a required classification score and/or a milk record completed under an official testing program, or for bulls, may or may not have daughter information included in their genetic evaluations.
- **TPI (Total Performance Index):** A bull that has not been genomic tested, but does have daughter information included in his genetic evaluation.

Line 2: Registered Name and TPI Value

Registered Name: Always includes the prefix of the breeder (the owner of the dam at the time she was bred), and may not exceed the 27-character limit, according to Holstein Association USA naming rules. Suffixes required on the animal's name must be included in the 27-character limit. Following are some suffixes you may see on pedigrees:

- **-RED:** Calf has red coat color
- **-TW:** Calf was a twin
- **-TRI:** Calf was part of a set of triplets
- **-ET:** Calf is the result of an embryo implanted into a recipient
- **-ETS:** Calf is the result of a split embryo
- **-ETN:** Calf is a clone

Total Performance Index (TPI®) value: An indicator of an animal's ability to transmit superior traits. TPI is a selection index calculated by Holstein Association USA. You can see Pride's TPI value is +1880. You may occasionally see different letters following a bull's TPI value. This indicates the source(s) of information used to calculate the genetic evaluation.

- **No label** = Domestic U.S. evaluation (no genomic data included)
- **G** = Genomic information is included in the evaluation
- **M** = The animal has a MACE (Multiple-trait Across Country Evaluation) evaluation. MACE evaluations are released by InterBull to estimate how sires from other countries would compare to sires with domestic U.S. proofs. InterBull (International Bull Evaluation Service) is a non-profit organization based in Uppsala, Sweden, responsible for calculating international genetic evaluations and promoting the development and standardization of the international dairy genetic evaluations.

MACE evaluations assist breeders by expressing information from other countries in the same format as U.S. animals are displayed. If a bull's evaluation contains information from both U.S. and foreign daughters (but no genomic information), it will be labeled with an M.

TPI Formula

$$\left[\frac{27(\text{PTAP})}{19.4} + \frac{16(\text{PTAF})}{23.0} + \frac{10(\text{PTAT})}{.73} - \frac{1(\text{DF})}{1.0} + \frac{12(\text{UDC})}{.8} + \frac{6(\text{FLC})}{.85} + \frac{9(\text{PL})}{1.26} - \frac{5(\text{SCS})}{.13} + \frac{11(\text{DPR})}{1.0} - \frac{2(\text{DCE})}{1.0} - \frac{1(\text{DSB})}{0.9} \right] 3.8 + 1832$$

**The value 1832 adjusts for the periodic base change, allowing TPI values to be compared across time.*

PTAP = PTA Protein	PL = PTA Productive Life
PTAF = PTA Fat	SCS = PTA Somatic Cell Score
PTAT = PTA Type	DPR = PTA Daughter Pregnancy Rate
DF = STA Dairy Form	DCE = PTA Daughter Calving Ease
UDC = Udder Composite	DSB = PTA Daughter Stillbirth
FLC = Feet & Legs Composite	

Line 3: Nation Code, Registration Number, RHA, and Genetic Codes

Nation Code: Indicates the country an animal is registered in. Animals registered in the U.S. will have a country code of either "USA" or "840" (the International Organization for Standardization numeric code of the United States).

Registration Number: The animal’s registration number officially identifies them in the Holstein Association USA database.

Genetic Codes: Genetic codes indicate the results of any genetic tests that have been done on the animal, labeled so breeders can see if there are any traits or conditions they should be aware of. Pride has not had any genetic tests done, so she has no genetic codes, but if you look at her sire, you will see an example of how these codes are presented on a pedigree.

Holstein Gene Codes			
BL	Bovine Leukocyte Adhesion Deficiency (BLAD)*	PO	Observed Polled**
CV	Complex Vertebral Malformation (CVM)*	PC	Tested Heterozygous Polled**
DP	Deficiency of Uridine Monophosphate Synthase (DUMPS)*	PP	Homozygous Polled**
MF	Mulefoot (Syndactyly)*	RC	Carries gene for red hair color*
BY	Brachyspina*		

*Note: This is not an exhaustive list. * denotes a recessive trait **denotes a dominant trait*

If an animal is tested free of a trait (meaning they do not carry any alleles for the trait), that result is also recorded and published on pedigrees and genetic evaluations. If the animal is not a carrier, they cannot pass those genes down to the next generation.

Tested-Free Codes			
TL	Tested free of BLAD	TY	Tested free of Brachyspina
TV	Tested free of CVM	TP	Tested free of the polled condition (horned)
TD	Tested free of DUMPS	TR	Tested free of genes for red hair color
TM	Tested free of Mulefoot		

Line 4: Age at Classification, Final Score, Major Breakdowns, and Recognitions (if applicable)

Pride is just a heifer so she has not been classified or earned any Holstein Association USA recognitions yet, but if she had any of that information, it would be located in this space. For an example, look at Pride’s dam’s information (described here under Section 7).

4. PTA +774M# +26F# +24P# 39%R 4/2013
 PTA +.9PL# 2.94SCS# -1.9DPR# 6%DCE#
 PTA +3.57T#+2.95UDC#2.44FLC# 39%R 4/2013

This section of the pedigree contains genetic values for the animal, allowing the viewer to see important information about the animal’s transmitting ability for several traits. PTA (Predicted Transmitting Ability) expresses the level of genetic superiority that an animal transmits to its offspring for a given production or type trait. PTA values are used to rank animals based on their genetic merit.

For young animals, PTA values are estimated by averaging the sire and dam’s PTA values. When the genetic values listed are based on parental average, it is indicated by the “#” symbol, as you can see on Pride’s pedigree.

Line 1: PTAs for Pounds of Milk (M), Pounds of Fat (F) and Pounds of Protein, along with the percent reliability for the production evaluation and the month and year the evaluation was calculated

Line 2: PTAs for Productive Life (PL), Somatic Cell Score (SCS), Daughter Pregnancy Rate (DPR), and Daughter Calving Ease (DCE)

Line 3: PTAs for Type (T), Udder Composite (UDC), and Feet & Leg Composite (FLC), along with the percent reliability for the type evaluation and the month and year the evaluation was calculated

Linear composite indexes such as UDC and FLC combine linear trait information on several related traits into one numerical value. Composite indexes can be used as a selection tool in breeding programs to identify animals which are predicted to transmit a desirable combination of the traits included in the composite, which can be more effective than simply selecting for individual traits. The values for each trait in a composite index are weighted according to their economic value and added together to arrive at the index value, then standardized.

Traits included in the **Udder Composite Index** are Udder Depth, Fore Udder Attachment, Rear Udder Height, Rear Udder Width, Udder Cleft, Front Teat Placement and Rear Teat Placement.

The **Feet & Leg Composite** incorporates three linear traits: Foot Angle, Rear Legs-Rear View and Rear Legs-Side View, combined with Feet & Leg Score.

Learn more about all of the composite indexes and how they are calculated in the Holstein Foundation’s free Understanding Genetics & the Sire Summaries workbook!

5. REGANCREST-GV S BRADNICK-ET P9 50K GTPI
 USA 66625940 100%RHA-NA TR TV TL TY TD +1932 G
 3-05 94 EEEE 12/16/2009

Sections 5 and 6 as labeled on this pedigree include information about the father of the animal, known as the sire.

Line 1: P-Level and TPI Type

If an animal has been genomic tested, you will find the indicator on this line, after the P-level. Bradnick has been tested with the 50K SNP genomic test. Following are genomic test indicators you might find on a pedigree are:

- **3K:** Tested with the 3K SNP Genomic Test
- **6K:** Tested with the 6K SNP Genomic Test
- **9K:** Tested with the 9K SNP Genomic Test
- **50K:** Tested with the 50K SNP Genomic Test
- **IMP:** This animal has an imputed GTPI, meaning that they have enough offspring who have been tested that the genetic evaluation is able to estimate enough of their genotype to provide a comparable genomic evaluation. For more information about the different types of genomic tests available, visit www.holsteinusa.com.

Line 2: Sire's Registered Name and TPI Value

Line 3: Sire's Nation Code, Registration Number, %RHA and Genetic Codes

Line 4: Classification scores, recognition information and date of birth

- Many bulls have their physical conformation evaluated by Holstein Association USA classifiers and receive official classification scores. Three pieces of information are provided here about the classification score.
 - **Age at classification** is represented in years and months. Bradnick received the listed classification score when he was three years and five months of age (3-05).
 - **Final Score:** Bradnick is scored 94 points, putting him in the Excellent category.
 - **Major Breakdowns:** To arrive at a final score, each animal receives a score for several individual traits, which fall into categories known as major breakdowns. Bulls have four major breakdowns:
 - Front End & Capacity = 40% of the final score
 - Dairy Strength = 25%
 - Rump = 10%
 - Feet & Legs = 25%

Pedigrees show what category of score each major breakdown received:

- E = Excellent (90-100 points)
- V = Very Good (85-89 points)
- + = Good Plus (80-84 points)
- G = Good (75-79 points)
- F = Fair (65-74 points)
- P = Poor (50-64 points)

You can see that Bradnick has scored Excellent in all four major breakdowns.

- Some bulls will be recognized as **Gold Medal Sires**, such as Braedale Goldwyn on this Pedigree, indicated as "GM" with the month and year the recognition was given. To be recognized as a Gold Medal Sire, bulls must meet a minimum TPI requirement (updated semi-annually to recognize approximately 25 new bulls each year), have a minimum 90% reliability for PTA Fat and PTA Type, and be free of undesirable recessive traits. All bulls 87% RHA and higher are automatically evaluated twice a year, and Gold Medal Sire recognition is permanent.
- **Date of Birth:** Bradnick was born on December 16, 2009 (12/16/2009)

6-06 95	EEEEEE	2E		03/03/2006

7.

Line 1: Dam's TPI Type

Line 2: Dam's Registered Name and TPI Value

Line 3: Dam's Nation Code, Registration Number, %RHA and Genetic Codes

Line 4: Classification scores, recognition information and date of birth

- **Age at classification** is represented in years and months. Ava received the listed classification score when she was six years and six months of age.
- Final Score: Ava is scored 95, putting her in the Excellent category
- Major Breakdowns: The current classification breakdowns were introduced in December 2004. Classification scores assigned before this date are underlined on pedigrees. Cows have five major breakdowns:
 - Front End & Capacity = 15% of the final score
 - Dairy Strength = 20%
 - Rump = 5%
 - Feet & Legs = 20%
 - Udder = 40%
- **Multiple E designation:** Cows may receive multiple E designation if classified Excellent subsequent times in the following age brackets (2E and higher designations are listed on the pedigree):
 - 1E: Up to 6 years old
 - 2E: 6 to 9 years old
 - 3E: 9 to 12 years old
 - 4E: 12 to 15 years old
 - 5E: 15 to 18 years
 - 6E: Any subsequent three year period
- Recognitions (if applicable): Holstein Association USA can designate cows with two major recognitions: Gold Medal Dam (GMD) and Dam of Merit (DOM). Bradnick's dam, Brea, has received both of these honors.

- **Gold Medal Dam:** A cow must meet several strict criteria to be recognized as a GMD. She and at least three of her daughters must be classified. The cow herself must be milking in a herd participating in a Holstein TriStar service option (Custom, Deluxe or Premier). Equal emphasis is placed on both production and type, and on progeny and dam performance; the dam's age adjusted final and Mature Equivalent (ME) production records are evaluated, along with the average of the daughters' age adjusted classification scores and ME production records. Separate cutoffs are determined by the birth year of the dam. If the cow herself does not qualify on an ME production basis, she may qualify based on high lifetime production credits (200,000 pounds of milk OR 7,200 pounds of fat, OR 6,400 pounds of protein). Automatic evaluation is done twice a year for all cows 87% RHA or higher that were born in the past 25 years, and GMD is a permanent recognition.
- **Dam of Merit:** To be recognized as a DOM, a cow must have a GTPI or CTPI exceeding a cutoff based on their year of birth. The cow must have at least three offspring with a PTA for production and type, and the animal's GTPI or CTPI must be calculated using a required classification score. Automatic evaluation is done twice a year for all cows 87% RHA or higher that were born in the past 25 years and milking in a herd enrolled in a Holstein TriStar service option. Like the others, DOM is permanent recognition.

- **Date of Birth:** Ava was born on March 3, 2006 (3/3/2006)

This portion of the pedigree contains information about the cow's milk production records, and can be listed for any female on the pedigree (when available), always found beneath the PTA information. In this instance, it is for Pride's dam, Ava. Pride doesn't have any milk production information herself as she is just a heifer. Herds must be enrolled in an option of Holstein Association USA's TriStar program in order to have production records printed on pedigrees.

	AGE	X	DAYS	MILK	DCRM	%	FAT	%	PRT	DCRC

			365	56330	93	4.1	2301	3.3	1865	93
LIFE	1675		195810			4.1	7986	3.5	6811	

Several columns of information provide key data about a cow's lactations:

- The first column includes an indicator for the level of the TriStar program the herd was enrolled in when the cow made the record, either Custom (*), Deluxe (**), or Premier (***), for all records made after January 1997. Records started before January 1997 will have an indicator of which type of testing program the cow was enrolled in.
- Age of the cow when the record was started (AGE), listed as years and months, like the classification score.
- Number of times per day the cow was milked (X)
- Number of days included in the listed lactation (DAYS)
- Pounds of milk (MILK)
- Data Collection Rating for pounds of Milk (DCRM)
- Percent fat for the lactation (%)
- Pounds of fat for the lactation (FAT)
- Percent protein for the lactation (%)
- Pounds of protein for the lactation (PRT)
- Data Collection Rating for Components (DCRC)

Any "X" at the end of a row of production information indicates that the record contains some extreme test-day data. A second row of production information for a lactation is only listed if the cow's lactation lasted longer than 305 days (up to 365 days) for that lactation. One a cow produces more than 100,000 pounds of milk, her total production information appears on the pedigree and is labeled "LIFE."

State and national leader records for Milk, Fat and Protein production are labeled on the line below the outstanding record. The designation indicates the placing (1st, 2nd or 3rd), where the record was made (either the state abbreviation or NAT for a National record), and category (MILK, FAT, or PROTEIN). This recognition is based on TriStar Premier records and awarded in seven age categories.

H.M. ALL-AMERICAN SPR HFR CALF 2006

 5th INTERNATIONAL 5Y COW 2011
 2nd MID-W SPR NAT 6Y+ COW 2012
 3rd MID-W FALL NATL SPR YR HFR 2007

10.

If a female on the pedigree placed in the top five in a class at a National Holstein Show, her placing will be listed beneath all milk production information. All-American recognitions may also be included on the pedigree.

11.

Protein reported is true protein. 004302831 2131027 8/2/2013

Included here is a label for the type of protein listed on the pedigree (true or crude), along with two Holstein USA Processing Numbers, and the date the pedigree was issued.

In May 2000, Holstein Association USA began printing True Protein as the default format. Crude protein is still available as an option when ordering internet pedigrees for international marketing purposes.

PRACTICE ACTIVITIES

What Are Your Goals?

Imagine that you have won a \$2,500 calf scholarship to purchase a heifer as your dairy project. What are some minimum criteria you would like to set for animals you will consider purchasing?

- Age _____
- Heifers PTPI or GTPI _____
- %RHA _____
- Dam's classification score _____
- Dam's milk production _____

List any other criteria you will consider:

- _____
- _____
- _____

Test Your Pedigree Knowledge

Use the pedigree for Wormont Observer Alexis on the following page to complete the exercise

1. What is Alexis' p-level?
2. What is her sire's TPI?
3. What does "PTA" stand for on a pedigree?
4. What is her dam's final score and age at classification?
5. What is Planet's relationship to Alexis?
6. Which maternal female relative has the highest CTPI?
7. What is her sire's reliability for PTA Type?
8. What is the dam's PTA for pounds of protein?
9. What is the name of the granddam that is a Gold Medal Dam?
10. Of the three bulls listed on the pedigree, which has the highest PTA for milk?
11. What is Alexis' herd management number?
12. What is the country code, registration number and %RHA of her maternal grandsire?
13. When was Alexis born?
14. How many pounds of milk did her dam produce in her first 305-day lactation?
15. What is Alexis' PTA for Productive Life?
16. What is her sire's PTA for Udder Composite?
17. Which version of genomic test was Alexis tested with?
18. What is her maternal grand dam's percent Registered Holstein Ancestry?
19. What is her sire's PTA for Protein Percent?
20. Which animal on the pedigree has been tested and found to be a carrier for the red coat color gene?
21. What does "SCS" stand for on a pedigree?

Alexis

Practicing Pedigree Comparisons

Answer these questions using the following two pedigrees.

1. Which calf's maternal granddam has lifetime production records?
2. Which calf is a bull?
3. Which calf is sired by the bull with a higher TPI?
4. Which calf's dam has the higher Udder Composite index?
5. Which calf has direct family members that are carriers of brachyspina?
6. Which dam is predicted to transmit a higher level of overall type?

Rank These Heifers

It is time to put your pedigree knowledge and evaluation skills to work! Assume you have your choice of these four heifers for your next project animal. Which one would you choose? Before looking at the pedigrees, first answer the following questions.

1. What are your goals for this heifer?

2. List the pedigree information and criteria you plan to consider when making your decision.

Now look at the four pedigrees on the following pages and rank them in the order that you would like to own the animals.

Rank the heifers in the order you would purchase them.

Which heifer would be your first choice and why?

Tanya

Holstein Foundation Workbook Contribution Form

Our series of Holstein Foundation workbooks are provided free of charge as an educational resource for dairy youth and adults around the world. The development of these workbooks is supported by contributions from generous individuals who believe in the Holstein Foundation's mission of promoting and supporting programs that provide leadership for the dairy industry. If you would like to make a gift to help ensure we can continue providing these resources, please complete this form and return it to the address below. Donations may also be made with a credit card online at www.holsteinfoundation.org.

Full name, as you would like to be recognized for your gift:

Address _____

City _____ State _____ Zip Code _____

Preferred Phone Number _____ Home Mobile Office

Preferred Email Address _____

I would like to receive the Holstein Foundation E-Newsletter

I would like to make a one-time / monthly (circle one) donation to the Holstein Foundation, in the amount of \$ _____ for a period of _____ months.

This gift is a memorial gift in memory of _____.

Instructions _____

A note will be sent to the family of the above individual, notifying them of your gift.

Checks should be made payable to "Holstein Foundation" and sent to the address below.

Thank you for your contribution to the Holstein Foundation, and your support of young people in the dairy industry. Your gift makes the programs of the Foundation and our mission of developing dairy leaders for tomorrow a reality.

Please mail this form along with your contribution to:

Holstein Foundation

PO Box 816

Brattleboro, VT 05302-0816
